

ASKOLL eS₃ EVOLution, the evolution of the species. Electric.
The new color range for the e-moped, now smarter and always connected.

On the market since summer 2019, for eS₃ EVOLution, it's already time for a restyling. During Eicma, Askoll showcases the **new colors** of its latest e-moped. In addition to **GreyEVO** (enriched by fluo details and black saddle, fork and wheel rims), from next season eS₃ EVOLution is available in **electric blue**, **metallic red** (both with silver saddle, fork and wheel rims), and in **titanium grey** (equipped with black saddle, fork and wheel rims).

eS₃ EVOLution's news is both functional and technological, but it keeps its predecessor's performance. A longer **two-seater saddle** promises the **maximum comfort** for both the rider and the fellow passenger; a **full digital display**, and the **smoked cowl** is standard equipment. New is also the braking system: the **double-disc brake** and the **CBS system for combined braking** guarantee an extraordinary stopping power and the maximum safety under any conditions.

The **full digital display** with **connectivity system**, **Bluetooth** and dedicated App make travelling a much more immersive experience. An engaging interface and ease-to-use characterize **Askoll Smart Drive**, the **new App available for Android and iOS**, that follows your trips on the saddle of eS₃ EVOLution.

Thanks to **Askoll Smart Drive**, and its captivating interface, you can monitor your vehicle's performances. From kilometres travelled to remaining battery levels; from estimate range for each travel mode to your savings, both economic and CO₂-wise, through all service notices, and, discover the closest service centres.

eS₃ EVOLution reaches **66 km/h** and has a range **up to 96 km***. The electric brushless Askoll motor of highly energy-efficiency - with magnets of rare earth elements – is powered by two lithium-ion battery packs with a **total capacity of 2800 Wh and 8,1 kg of weight** for each battery pack.

The CBS braking system guarantees maximum safety in any condition of use. The **telescopic hydraulic suspension** at the front and **single shock-absorber** at the rear, as well as the **large tyres** (80/80 16" at the front and 90/80 16" at the rear), allow it to adapt to any road surface. The large wheels with **dual blend tyres** – soft at the sides and rigid in the middle – ensure greater stability at every bend and fluidity during the journey.

Like all the other Askoll mopeds, eS₃ EVOLution is lightweight (86 kg, batteries included), extremely maneuverable, and very handy, even when it has to be recharged: its **swappable lithium-ion batteries** can be recharged easily from **any power outlet** in about **three hours per kWh**.

eS₃ EVOLution can adapt to any type of route, thanks to a choice of **three different travel modes**: Eco, for minimum battery consumption; Normal, for everyday urban trips; Power, ideal for particularly hilly cities.

eS₃ EVOLution is provided with a full LED lighting system and a comfortable standard feature front storage compartment with a 12V socket.
